Art Unit: 1633

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-11, drawn to a method for treating inflammation comprising administering an antisense, which is a nucleic acid, integrin linked kinase (ILK) inhibitor specific to ILK, classified in class 536, subclass 24.5.
  - II. Claims 1-10 and 12, drawn to a method for treating inflammation comprising administering an inhibitor of ILK that is an antibody specific to ILK, classified in class 424, subclass 130.1.
  - III. Claims 1-10 and 13, drawn to a method for treating inflammation comprising administering an inhibitor of ILK that is a small organic molecule that blocks ILK catalytic or binding activity, classified in class 514, subclass 1.
  - IV. Claims 1-10 and 14, drawn to a method for treating inflammation comprising administering an inhibitor of ILK that is an agent that affects ILK activity through direct or indirect modulation of PtdIns(3, 4, 5)P3 levels, classified in class 514, subclass 1.

Claims 1-10 link(s) inventions I-IV. The restriction requirement among the linked inventions is subject to the nonallowance of the linking claim(s), claims 1-10. Applicant(s) are advised that if any such claim(s) depending from or including all the limitations of the allowable linking claim(s) is/are presented in a continuation or divisional application, the claims of the continuation or divisional application may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application. Where a restriction

Art Unit: 1633

requirement is withdrawn, the provisions of 35 U.S.C. 121 are no longer applicable. See *In re Ziegler*, 44 F.2d 1211, 1215, 170 USPQ 129, 131-32 (CCPA 1971). See also M.E.P.. § 804.01.

2. The inventions are distinct, each from the other because of the following reasons:

Groups I-IV are distinct from each other because they are drawn to materially different methods using compositions having different chemical structure, physical properties and biological functions, and requiring separate search: antisense nucleic acids, antibodies, small organic molecules that blocks ILK catalytic or binding activity and agents that affects ILK activity through direct or indirect modulation of PtdIns(3, 4, 5)P3 levels. Those methods differ at least in method steps, reagents and doses used, schedules used, response variables, and criteria of success. They have different classifications and the search would not be coextensive. Thus, groups I-IV are patentably distinct from each other.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter and as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently

Art Unit: 1633

named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(I).
